

Weekly report on the epidemiology of COVID-19 in Ireland

Week 23, 2022

- The epidemiological weeks in this report, run from Sunday to Saturday. Please refer to the [HPSC website](#) for a complete list of epidemiological weeks with start and end dates for 2020-2022.
- Reference dates:
 - Week 10, 2020 (01/03/2020 to 07/03/2020) – the beginning of the pandemic in Ireland, also the start of the first wave
 - Week 32, 2020 (02/08/2020 to 08/08/2020) – the beginning of the 2nd wave
 - Week 48, 2020 (22/11/2020 to 28/11/2020) – the beginning of the 3rd wave
 - Week 26, 2021 (27/06/2021 to 03/07/2021) – the beginning of the 4th wave
 - Week 51, 2021 (19/12/2021 to 25/12/2021) – the beginning of the 5th wave
 - Week 23, 2022 (05/06/2022 to 11/06/2022) – most recent epidemiological week
- Data for this report are based on cases notified on the Computerised Infectious Disease Reporting (CIDR) and HSE Positive Antigen Portal up to midnight 11/06/2022. Data were extracted from CIDR system on 15/06/2022. Data are provisional and subject to ongoing review, validation and update. As a result, figures in this report may differ from previously published figures.
- A confirmed case of COVID-19 is any person for whom SARS-CoV-2 is detected by PCR. At present, antigen testing undertaken outside the governance of the public laboratory service is not recognised for the purpose of notification of COVID-19. For surveillance purposes, a self-administered positive antigen test registered on the HSE Antigen Portal is not considered to be a confirmed COVID-19 case as it is not subject to data validation and linkage to previous or subsequent PCR results is not feasible.
- In this report, confirmed cases notified on CIDR and cases who have registered a positive antigen test result on the HSE Antigen Portal are presented separately.
- Data from both sources (CIDR and the HSE Antigen Portal) should be interpreted in the context of the current testing policy. Testing policies can affect the number and age distribution of confirmed cases notified on CIDR. Information on the current testing policy in Ireland can be found [here](#)
- Data for late December 2021, and January 2022, do not accurately reflect trends. Due to a surge in case numbers the turnaround time for processing notifications increased. Notifications between 19/12/2021 and 15/01/2022 (week 51, 2021 to week 2, 2022) are reduced, while notifications

between 16/01/2022 and 29/01/2022 (weeks 3 and 4, 2022) are inflated compared to cases diagnosed during these weeks.

Key points

Notified confirmed cases

- In week 23 (between June 05 and June 11 2022) there were 6,839 new confirmed COVID-19 cases reported on CIDR. This is an increase of 46.4% compared to week 22 when there were 4,672 confirmed COVID-19 cases notified.
- The highest number of new confirmed COVID-19 cases in week 23 was in the age group of 35-44 years with 20.4% of notified cases in week 23.

Laboratory data of SARS-CoV-2 PCR tests

- In week 23, a total of 31,886 SARS-CoV-2 tests were performed, of which 7,816 (24.5%) were positive. This is an increase of 2.9% in tests performed and an increase of 7.4% in positive tests in comparison to week 22.

Self-reported antigen positive cases

- In week 23, a total of 8,804 positive antigen test results were registered on the HSE Positive Antigen Portal. This is an increase of 55.2% reported results compared to week 22 when 5,673 cases were registered.

Deaths

- Since the start of the pandemic 7,442 COVID-19 deaths among notified COVID-19 cases have been reported on CIDR. Of these, 5 had a date of death in week 23.

Table 1: Summary characteristics of COVID-19 cases notified in Ireland during week 23, 2022

	Number	Percentage
Total number of confirmed cases	6,839	
Incidence rate of confirmed cases per 100,000 population	143.6	
Healthcare workers	18	0.30
Healthcare workers where known		10.20
Severe cases		
Number of cases hospitalised	292*	4.27
Number of cases admitted to ICU	1*	0.01
Number of deaths among confirmed cases	3*	0.04

* The number of cases hospitalised, cases admitted to ICU and deaths described in the above table relate only to COVID-19 cases who were notified during this reporting period, and where the outcome is known at the time of reporting. It does not reflect all hospitalisations, ICU admissions and deaths related to COVID-19 which occurred during the period covered by the report. It also does not reflect the final number of cases hospitalised, admitted to ICU or deaths for these cases notified during this period as the outcome may not yet have occurred, or is yet to be notified

Confirmed cases of COVID-19

Since the start of the pandemic, 1,574,108 confirmed COVID-19 cases have been notified on CIDR. In the past week, week 23 2022, 6,839 confirmed COVID-19 cases were reported on CIDR. This is an increase of 46.4% compared to week 22 when 4,672 confirmed COVID-19 cases were notified. Figure 1 shows the epidemiological curve of COVID-19 cases notified in Ireland from week 1 2021 to week 23 2022.

Figure 1: Number of confirmed COVID-19 cases by notification week and epidemiological date in Ireland between week 1, 2021 and week 23, 2022. The red bars represent the number of confirmed cases by notification date. The purple line represents the number of cases by epidemiological date. The pink horizontal lines indicate when a new wave starts. The dark blue horizontal lines indicate a change in test policy^{1 2}

¹ Since 14/01/2022 (week 2), a confirmatory PCR test after a positive antigen test was no longer needed for those in the community aged between 4 and 39 years of age outside of a risk group.

² Since 28/02/2022 (week 9), PCR testing is only needed for symptomatic people in the community within certain risk groups: those who have not had booster vaccination and are aged 55 years and older; those with a high-risk medical conditions; those who are immunocompromised; those who live in the same household as a person who is immunocompromised; those who provide care or support for person they know to be immunocompromised; those who are pregnant; Healthcare Workers.

Confirmed COVID-19 cases by age and sex

Table 2: Summary characteristics by age and sex of COVID-19 cases notified in Ireland during week 23, 2022

	Number	Percentage
Gender		
Males	2,823	41.3
Females	4,014	58.7
M:F ratio	0.7	
Age (years)		
Mean age	45	
Median age	44	
Age range	0 - 101	
Age groups (years)		
0-4	124	1.8
5-12	154	2.3
13-18	151	2.2
19-24	410	6.0
25-34	1,248	18.2
35-44	1,396	20.4
45-54	1,256	18.4
55-64	1,111	16.2
65-74	520	7.6
75-84	316	4.6
85+	153	2.2
Unknown	0	0.0

*Excluding 0 for whom age is unknown, 2 for whom sex is unknown and 0 for whom both are unknown

Figure 2: Cumulative age and sex specific incidence rates of confirmed COVID-19 cases per 100,000 population for current week 23, 2022

Figure 3: Heat map of weekly age-specific incidence rates of confirmed COVID-19 cases per 100,000 population in Ireland for the last 8 weeks

Cases and incidence by county

Table 3: Characteristics of confirmed COVID-19 cases by county and descending incidence rate per 100,000 notified in Ireland, during week 23, 2022

County	Number of cases	Percent	M:F ratio	Median age	Incidence rate per 100,000
Limerick	399	5.8	0.7	48.0	204.7
Clare	221	3.2	0.9	48.0	186.0
Louth	238	3.5	0.7	44.0	184.7
Galway	452	6.6	0.6	43.0	175.2
Laois	141	2.1	0.7	44.0	166.5
Kilkenny	160	2.3	0.6	42.5	161.2
Donegal	256	3.7	0.6	44.5	160.8
Kildare	356	5.2	0.7	43.0	160.0
Wicklow	211	3.1	0.7	40.0	148.1
Tipperary	229	3.3	0.7	47.0	143.5
Dublin	1,925	28.1	0.7	42.0	142.9
Carlow	81	1.2	0.5	51.0	142.3
Meath	276	4.0	0.7	45.0	141.5
Waterford	161	2.4	0.7	44.0	138.6
Kerry	191	2.8	0.9	52.0	129.3
Wexford	192	2.8	0.7	43.0	128.2
Offaly	98	1.4	1.0	50.0	125.7
Roscommon	79	1.2	1.3	46.0	122.4
Longford	50	0.7	0.7	45.5	122.3
Cork	656	9.6	0.7	44.0	120.8
Mayo	149	2.2	0.5	48.0	114.2
Sligo	74	1.1	0.8	52.5	112.9
Westmeath	91	1.3	0.7	37.0	102.5
Cavan	78	1.1	0.6	46.5	102.4
Leitrim	28	0.4	0.9	45.5	87.4
Monaghan	47	0.7	0.8	44.0	76.6

Figure 4: Heat map of weekly incidence rates of confirmed COVID-19 cases per 100,000 population, by county, notified in Ireland for the last 8 weeks

Hospitalisations

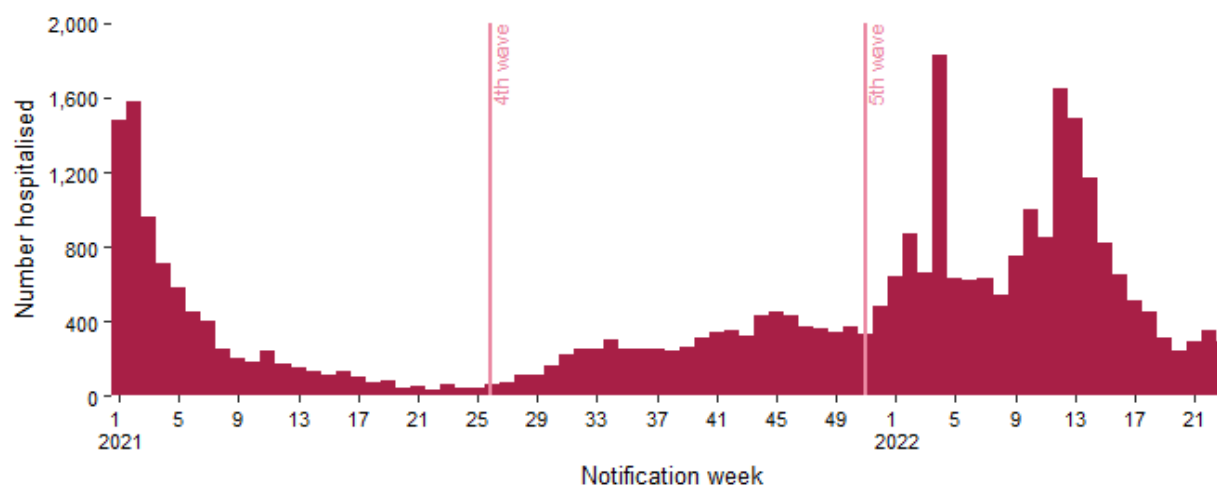

Figure 5: Hospitalisations among confirmed COVID-19 cases notified on CIDR in Ireland between week 1, 2021 and week 23, 2022

Table 4: Number of COVID-19 cases and hospital admissions by age group in Ireland for week³ 23, 2022 based on week of notification⁴

Age group	Total cases	Hospitalised cases	
	Number of cases	Number of cases	Percentage
0-4	124	13	10.5
5-12	154	1	0.6
13-18	151	0	0.0
19-24	410	15	3.7
25-34	1248	25	2.0
35-44	1396	25	1.8
45-54	1256	17	1.4
55-64	1111	28	2.5
65-74	520	62	11.9
75-84	316	66	20.9
85+	153	40	26.1
Unknown	0	0	0.0

³ Hospitalisations may be underestimated for recent weeks as the outcome may not yet have occurred or may not yet have been reported to CIDR

⁴ Data are based on the date the case was notified on CIDR, and not the date of hospital admission

Figure 6: Age distribution of hospitalised confirmed COVID-19 cases notified on CIDR in Ireland between week 1, 2022 and week 23, 2022

Figure 7: Incidence rate by age group of hospitalisations among confirmed COVID-19 cases on CIDR in Ireland between week 1, 2022 and week 23, 2022

ICU admissions

Figure 8: Number of ICU COVID-19 ICU admissions in Ireland by week of ICU admission, between week 1, 2021 and week 23, 2022

Figure 9: Age distribution of confirmed COVID-19 cases admitted to by month of admission January, 2021 and June, 2022

Deaths

Please note the below figures and tables include all cases (confirmed, probable and possible) who have died.

A total of 5 cases had a date of death in the latest epidemiological week, 23. The mean and median age of those who died in the previous epidemiological week was 77 and 85 respectively.

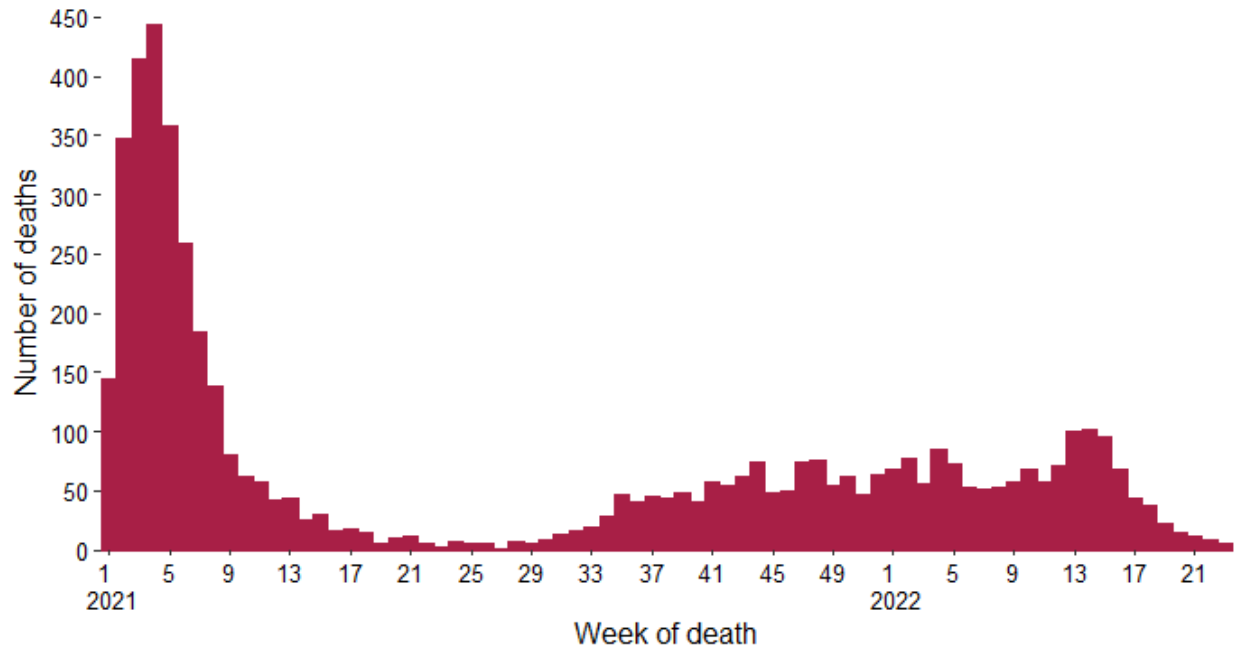

Figure 10: Total number of COVID-19 deaths notified by week of death, cases with a date of notification from week 1, 2021 to 23, 2022. Date of death missing for 0 of the reported deaths

Figure 11: Age distribution of COVID-19 deaths notified on CIDR in Ireland between January, 2021 and June, 2022

Laboratory data of SARS-CoV-2 PCR tests

In week 23, a total of 31,886 SARS-CoV-2 tests were performed, of which 7,816 (24.5%) were positive.

Figure 12: Number of completed laboratory tests by result and % positive tests⁵ in Ireland between week 1, 2021 and week 23, 2022. Data source: Deloitte Ireland LLP^{6, 7}

⁵ Positive tests refer to all positive specimens and includes duplicates and individuals who were retested.

⁶ Since 14/01/2022 (week 2), a confirmatory PCR test after a positive antigen test was no longer needed for those in the community aged between 4 and 39 years of age outside of a risk group.

⁷ Since 28/02/2022 (week 9), PCR testing is only needed for symptomatic people in the community within certain risk groups: those who have not had booster vaccination and are aged 55 years and older; those with a high-risk medical conditions; those who are immunocompromised; those who live in the same household as a person who is immunocompromised; those who provide care or support for person they know to be immunocompromised; those who are pregnant; Healthcare Workers.

Self-reported antigen positive cases

The following figures and tables are based on cases who registered a self-administered positive antigen test on the HSE Positive Antigen Portal. They are not considered confirmed cases and have undergone no data validation.

Table 5: Characteristics of COVID-19 cases who registered a positive antigen test to the HSE Positive Antigen Portal

	Week 2, 2022 - 23, 2022		Week 23, 2022	
	Number	Percentage	Number	Percentage
Total number of registered cases	544,553		8,804	
Incidence rate of registered cases per 100,000 population	11,435.7		185	
Gender				
Males	232,310	42.7	3,309	37.6
Females	300,513	55.2	5,133	58.3
M:F ratio	0.77		0.64	
Age (years)				
Mean age	32		40	
Median age	31		40	
Age range	0 - 105		0 - 94	

Figure 13: Number of COVID-19 cases who registered a positive antigen test on the HSE Positive Antigen Portal by week of registration⁸, and week of epidemiological date in Ireland between week 1, 2022 and week 23, 2022⁹

Figure 14: Age distribution of COVID-19 cases who registered a positive antigen test on the HSE Positive Antigen Portal by week of registration¹⁰ in Ireland between week 2⁸, 2022 and week 23, 2022

⁸ Reporting to the HSE Positive Antigen Portal commenced on Friday 14th January 2022, and therefore week 2 only includes 2 days.

⁹ Some cases reported a date of positive test much earlier than the date it was registered in the portal. Dates of positive test earlier than week 1, 2022 are not shown in the number of case by date of positive test. Dates of positive test which erroneously were reported to be later than the current epi week are excluded.

¹⁰ Please note, the week of registration on the HSE Positive Antigen Portal may differ from the week the positive test was obtained.

Notes

Technical Notes

1. Data Source

Data are based on statutory notifications and were extracted from Computerised Infectious Disease Reporting (CIDR) system and the HSE COVID care tracker. Data are provisional and subject to ongoing review, validation and update. As a result, figures in this report may differ from previously published figures. Slide with Laboratory testing for SARS-CoV-2 data provided by Deloitte Ireland LLP

2. Epidemiological date

Epidemiological date is based on the earliest of dates available on the case and taken from date of onset of symptoms, date of diagnosis, laboratory specimen collection date, laboratory received date, laboratory reported date or event creation date/notification date on CIDR. By using this date rather than event creation/ notification date, adjusts for any delays in testing/notification. Further information on epidemiological dates and weeks can be found on the [HPSC website](#).

3. Population data

Population data were taken from Census 2016. Data were aggregated into the following age groups for the analysis: 0-4 years, 5-12 years, 13-18 years, 19-24 years, 25-34 years, 35-44 years, 45-54 years, 55-64 years, 65-74 years, 75-84 years and ≥ 85 years.

Acknowledgements

Sincere thanks are extended to all those who are participating in the collection of data and reporting of data used in these reports. This includes the HSE COVID-19 Contact Management Programme (CMP), staff in ICU units, notifying clinicians, laboratory staff, public health doctors, nurses, surveillance scientists, microbiologists and administrative staff.
