

# Weekly report on the epidemiology of COVID-19 in Ireland

## Week 20, 2023

- The epidemiological weeks in this report, run from Sunday to Saturday. Please refer to the [HPSC website](#) for a complete list of epidemiological weeks with start and end dates for 2020-2023.
- Data for this report are based on cases notified on the Computerised Infectious Disease Reporting (CIDR) up to midnight 20/05/2023. Data were extracted from CIDR system on 23/05/2023. Data are provisional and subject to ongoing review, validation and update. As a result, figures in this report may differ from previously published figures.
- Data should be interpreted in the context of the current testing policy. Testing policies can affect the number and age distribution of confirmed cases notified on CIDR. Information on the current testing policy in Ireland can be found [here](#)

## Key points

### Notified confirmed cases

- In week 20 (between May 14 and May 20 2023) there were 435 new confirmed COVID-19 cases reported on CIDR. This is a decrease of 8.2% compared to week 19 when there were 474 confirmed COVID-19 cases notified.
- The highest number of new confirmed COVID-19 cases in week 20 was in the age group of 85+ years with 20.7% of notified cases in week 20.

### Laboratory data of SARS-CoV-2 PCR tests

- In week 20, a total of 4,615 SARS-CoV-2 tests were performed, of which 458 (9.9%) were positive. This is an increase compared to the previous week, 19, when 9.6% were positive.

### Deaths

- Since the start of the pandemic 8,960 COVID-19 deaths among notified COVID-19 cases have been reported on CIDR. Of these, 4 had a date of death in week 20.

**Table 1:** Summary characteristics of COVID-19 cases notified in Ireland during week 20, 2023 and 2023 to date

	Week 20, 2023		Total 2023	
	Number	Percentage	Number	Percentage
Total number of confirmed cases	435		18,389

<b>Severe cases</b>				
Number of cases hospitalised	222*	51.03	6,590*	35.84
Number of cases admitted to ICU	0*	0.00	76*	0.41
Number of deaths among confirmed cases	4*	0.92	336*	1.83

\* The number of cases hospitalised, cases admitted to ICU and deaths described in the above table relate only to COVID-19 cases who were notified during this reporting period, and where the outcome is known at the time of reporting. It does not reflect all hospitalisations, ICU admissions and deaths related to COVID-19 which occurred during the period covered by the report. It also does not reflect the final number of cases hospitalised, admitted to ICU or deaths for these cases notified during this period as the outcome may not yet have occurred, or is yet to be notified

## Confirmed cases of COVID-19

Since the start of 2023, 18,389 confirmed COVID-19 cases have been notified on CIDR. In the past week, week 20 2023, 435 confirmed COVID-19 cases were reported on CIDR. This is a decrease of 8.2% compared to week 19 when 474 confirmed COVID-19 cases were notified. Figure 1 shows the epidemiological curve of COVID-19 cases notified in Ireland from week 1 2022 to week 20 2023. Data since the start of the pandemic is available on the [Epidemiology of COVID-19 in Ireland infohub](#).

The red bars represent the number of confirmed cases by notification date. The purple line represents the number of cases by epidemiological date. The dark blue horizontal lines indicate a change in test policy<sup>1 2</sup>

<sup>1</sup> Since 28/02/2022 (week 9, 2022), PCR testing was only needed for symptomatic people in the community within certain risk groups: those who have not had booster vaccination and are aged 55 years and older; those with a high-risk medical conditions; those who are immunocompromised; those who live in the same household as a person who is immunocompromised; those who provide care or support for person they know to be immunocompromised; those who are pregnant; Healthcare Workers.

<sup>2</sup> Since 30/03/2023 (week 13, 2023), community test centres closed and PCR testing was only performed based on clinical assessment.

<sup>7</sup> Positive tests refer to all positive specimens and includes duplicates and individuals who were retested.

<sup>8</sup> Since 28/02/2022 (week 9), PCR testing is only needed for symptomatic people in the community within certain risk groups: those who have not had booster vaccination and are aged 55 years and older; those with a high-risk medical conditions; those who are immunocompromised; those who live in the same household as a person who is immunocompromised; those who provide care or support for person they know to be immunocompromised; those who are pregnant; Healthcare Workers.

<sup>9</sup> Since 30/03/2023 (week 13, 2023), community test centres closed and PCR testing was only performed based on clinical assessment.

## Notes

### Technical Notes

#### 1. Data Source

Data are based on statutory notifications and were extracted from Computerised Infectious Disease Reporting (CIDR) system and the HSE COVID care tracker. Data are provisional and subject to ongoing review, validation and update. As a result, figures in this report may differ from previously published figures. Slide with Laboratory testing for SARS-CoV-2 data provided by Deloitte Ireland LLP

#### 2. Epidemiological date

Epidemiological date is based on the earliest of dates available on the case and taken from date of onset of symptoms, date of diagnosis, laboratory specimen collection date, laboratory received date, laboratory reported date or event creation date/notification date on CIDR. By using this date rather than event creation/ notification date, adjusts for any delays in testing/notification. Further information on epidemiological dates and weeks can be found on the [HPSC website](#).

#### 3. Population data

Population data were taken from Census 2016. Data were aggregated into the following age groups for the analysis: 0-4 years, 5-12 years, 13-18 years, 19-24 years, 25-34 years, 35-44 years, 45-54 years, 55-64 years, 65-74 years, 75-84 years and  $\geq 85$  years.
